(57) Abstract :

Increasing rate of crimes and external attacks in the society, most probably in the sensitive areas, the manual work of monitoring is tedious. With usage being mainly on pose identification like crowd monitoring, behavioural analysis, suspicious movements, etc... It transfers data of any kinds of the human interventions normally required to detect intrusions that detect, classify, recognize or identify predetermined events obtained by live video, hat can be processed by this detection system. Video analytics, is the latest solution to generate immense interest in area of security and surveillance that plays a major role in the welfare of the society. Intelligent Video Surveillance (IVS) is automation model that used to automatically identify specific objects, behaviour or movements by means of data obtained through video footages or live recordings
