(57) Abstract :

The rapid growth of technology, business organizations have transferred over from the outdated method of selling goods to electronic methods of selling goods. Shopping is made easier and suitable for the customer through the internet. Most buyers explore various choices and preferences before making a purchase. More products will be purchased by the customers. The problem with buying online is customers have almost no idea how it will actually look real. With Augmented Reality (AR) customers can experience the virtually comfort from their homes. In this proposal, the customer can buy watches via AR app and able to place any piece of watch in wrist without needing to bring it there physically. The work is implemented to give better experience about the product and also help for the customer to buy their desired product.
