(57) Abstract :

Yoga is an ancient science and discipline originated in India 5000 years ago. It brings harmony to both body and mind with the help of asana, meditation and various other breathing techniques. Due to increase of stress in the modern lifestyle, yoga has become popular throughout the world. There are various ways through which one can learn yoga. Yoga can be learnt by attending classes at a yoga center or through home tutoring. It can also be self learnt with the help of books and videos. Most people prefer self-learning but it is hard for them to find incorrect parts of their yoga poses by themselves. In this proposal, we propose a yoga pose assessment method using pose detection and detected pose analysis. The pose of the user is compared with the pose of the expert and difference in angles of various body joints is calculated. Based on this difference of angles, feedback is provided to the user so that he/she can improve the pose.
